### DETAILED ACTION

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 91,94-104 are rejected as being obvious over USPN 5558806. USPN '806 suggests a composition comprising acid pesticides such as 2,4-D, dicamba, triclopyr, picloram or copyralid and a surfactant blend comprising a polyalkyleneoxide polysiloxane and an organic compound such as block copolymers of ethylene oxide and propylene oxide, polyethylene oxide, mono-polyglucoside, alcohol alkoxyate, phosphate ester, ethoxy sulfate, etc. and optionally a crop oil concentrate, i.e., mineral oil or methylated soybean oil. See abstract, column 2 lines 21 – column 4 line 27, column 6 lines 26-42, column 9 line 52 – column 10 line 2, Example 4. USPN '806 teaches that the concentration of the pesticide active ingredient ranges from about 2 to about 75% by weight of the composition and preferably ranges in an amount of from about 4 to about 40%. USPN '806 teaches that the weight ratio of pesticide to surfactant blend ranges from about 1:99 to about 99:1 and ranges preferably from about 40:60 to about 60:40. See column 9 lines 19-23,32-36. USPN '806 does not specifically teach a composition

comprising 2,4-D, dicamba, triclopyr, picloram or copyralid and a surfactant blend comprising a polyalkyleneoxide polysiloxane and block copolymers of ethylene oxide and propylene oxide or phosphate ester. However it would have been obvious to make said composition since the reference suggests the combination of ingredients. A reference does not have to provide all possible scenarios to suggest an invention.
